EDUCATION

Sahyadri College of Engineering and Management

B.E. in Computer Science Engineering; CGPA: 9.52 (till 6th Sem)

Mangaluru, Karnataka

Sept. 2023 – July 2027

EXPERIENCE

Datavex.ai Pvt Ltd

Software Engineering Intern

Mangaluru, Karnataka

Sept. 2025 – Present

- Engineered scalable frontend modules for an AI-Powered CRM and a multi-tenant SaaS platform, optimizing UX and application performance by implementing custom pagination and debounced search features using React.js and Next.js (App Router).
- Developed a multi-stage student profiling pipeline and complex workflow-oriented UI, leveraging TanStack React Query and Redux Toolkit for real-time state synchronization.
- Secured multi-user sessions and authentication by implementing Role-Based Access Control (RBAC), SSR cookie forwarding, API interceptors, and anti-CSRF validation.
- Integrated FastAPI endpoints with a custom automated email processing system and AI scoring engine, leveraging Azure OpenAI to analyze incoming inquiries and generate real-time responses rendered on the client side.
- Containerized frontend applications using Docker and managed seamless deployments across various Azure environments.
- Tech Stack:** React.js, Next.js, Redux Toolkit, TanStack React Query, FastAPI, Azure OpenAI, Docker, Azure VM

PROJECTS

Startup Foundry - AI-Powered Venture Intelligence Platform

FastAPI, Next.js, Apache Kafka, PostgreSQL, Playwright, Ollama, AWS EC2, AWS S3, Docker

- Developed a comprehensive, role-based Venture Capital platform with tailored workflows for Founders to pitch, Admins to audit, and Investors to discover startups.
- Engineered an event-driven FastAPI and Apache Kafka microservices architecture to asynchronously process heavy backend tasks without blocking the main application.
- Created an automated AI scoring engine (7B LLM) hosted on AWS EC2 to generate objective investment ratings, utilizing Playwright for market data scraping and AWS S3 for pitch deck storage.

JARVIS - Personal Desktop Assistant

Python, Flask, Gemini API, Vosk ASR, LlamaIndex

- Developed a local voice-driven desktop assistant using Python and Flask, integrating Gemini API for intelligent query processing and autonomous task execution.
- Implemented offline speech recognition using Vosk ASR to enable hands-free interaction and automate desktop operations such as application control and system commands.
- Built a tool-calling architecture for executing local actions including file management, web automation, and real-time hardware telemetry retrieval with spoken feedback.

FinDad - AI Financial Guidance Assistant

FastAPI, LangChain, Redis, ChromaDB, Gemini API

- Built a multi-tier RAG pipeline using Redis for semantic caching and ChromaDB as the vector store, with Gemini API to generate financial answers grounded in retrieved context.
- Implemented a document ingestion pipeline supporting both digital PDFs and scanned financial statements using OCR, with text chunking for accurate retrieval.
- Added a web-scraping fallback that pulls live data from trusted financial sources when internal knowledge wasn't sufficient to answer a query.

SKILLS

Programming Languages: JavaScript, Python, Java, SQL

Frontend: React.js, Next.js

Backend & AI: Node.js, Express.js, FastAPI, LangChain, LlamaIndex, RAG, Apache Kafka, Ollama, Azure OpenAI

Databases: PostgreSQL, MySQL, MongoDB, Firebase, ChromaDB

Tools & Platforms: Git, GitHub, Postman, Docker, Microsoft Azure, AWS, KNIME, n8n
